

SUPERSTORE SALES DATASET

Predict Sales using Time Series

INTRODUCTION

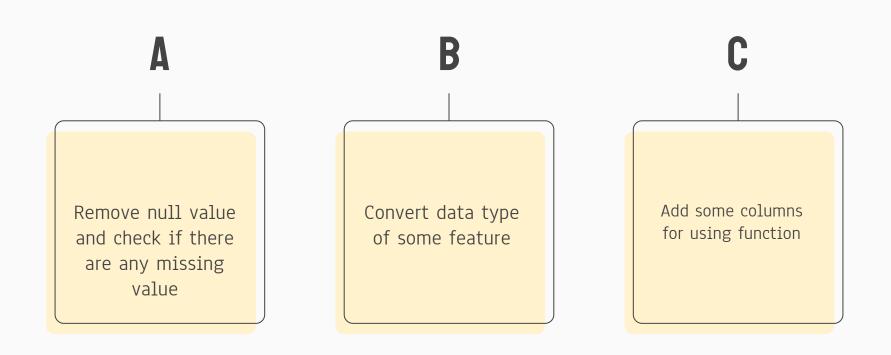

Retail dataset of a global superstore for 4 years deals with time series based data to extract patterns for predictions and other characteristics of the data. It uses a model for forecasting future values in a small time frame based on previous observations It is widely used for non-stationary data, such as retail sales forecasting.

Dataset Description	
Ship Date	Product shipping date.
Ship Mode	pattern of shipped the product.
Segment	Type of customer.
Postal Code	Number of postcode.
Sales level	Type of sales :costly, medium, cheap.

Preprocessing

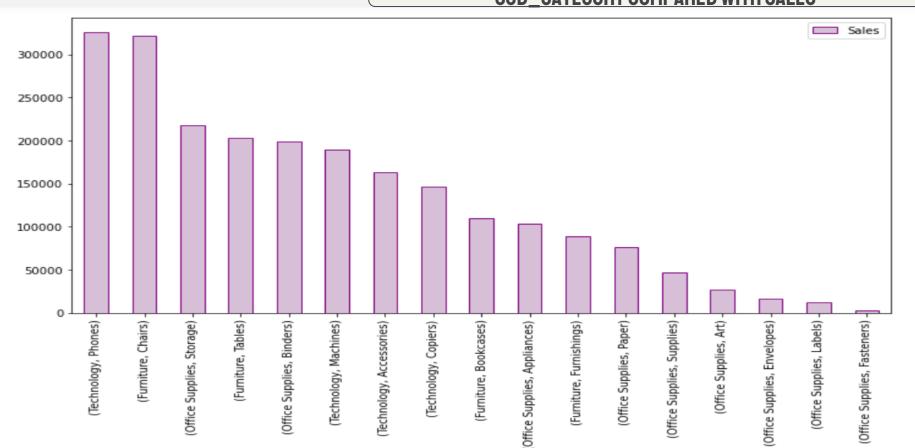

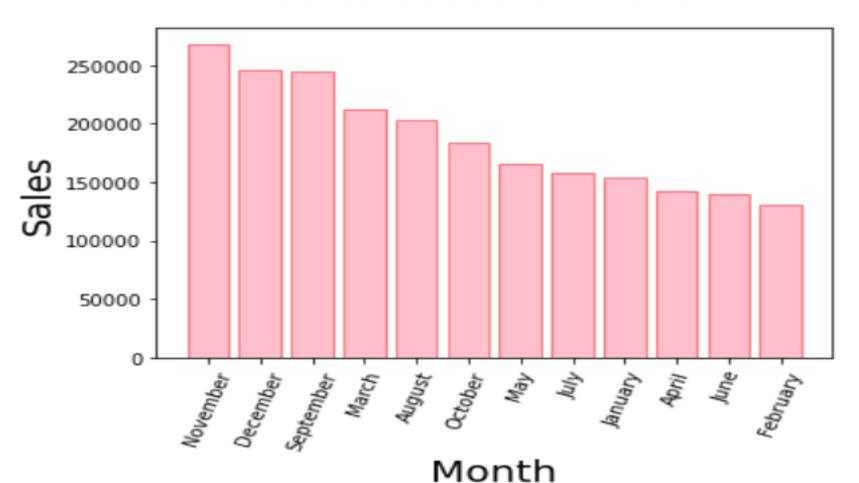

RESULT

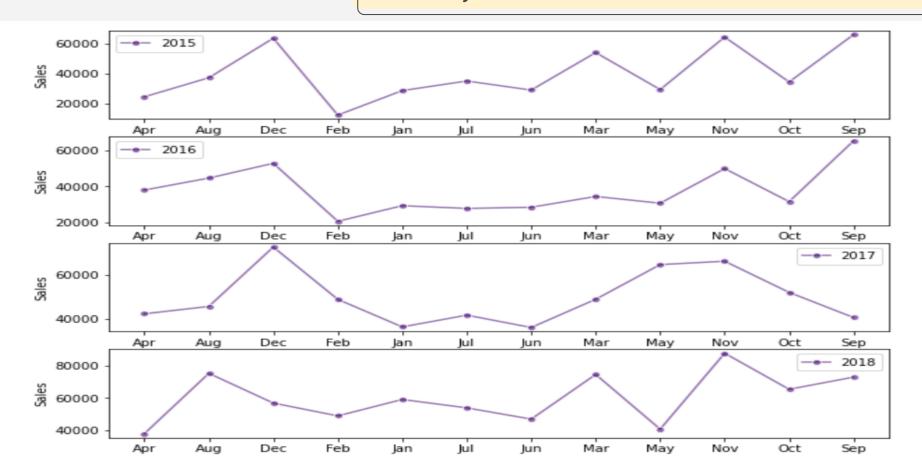

THIS IS FIGURE REPRESENTS THE HIGHEST PARTS OF CATEGORY AND SUB_CATEGORY COMPARED WITH SALES

Sales based on Month

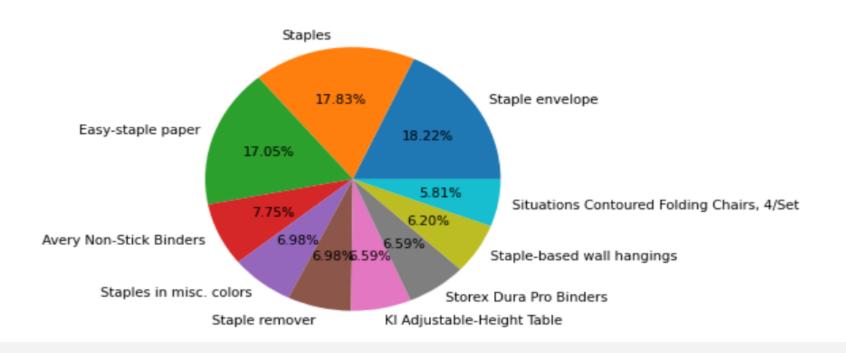

Monthly Year-to-Year observation of Sales Pattern.

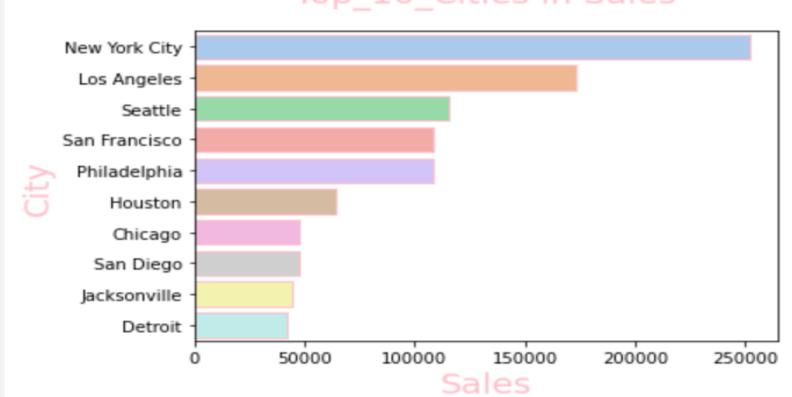

WHAT IS THE MOST PURCHASED PRODUCT?
